

Windows 10 Network Configuration

If you are having a problem with an Internet connection, try these instructions.

In the taskbar search field, type **network connections**.

Right click the appropriate network connection and select **Properties**.

Uncheck Internet Protocol Version 6 (TCP/IPv6).

Select Internet Protocol Version 4 (TCP/IPv4) and click **Properties**.

Check both the “**Obtain an IP address automatically**” and the “**Obtain DNS server address automatically**” radio buttons.

Click **OK** to close the window.
